
Getting Started

WordPress Knowledge

Although building a website with WordPress is significantly much easier than coding it by yourself, if you are a beginner, even working with WordPress may be difficult to you. That's why, in this section we will provide some useful links and also will explain how to get oriented in the documentation and what pattern to follow when building your website with our theme. Please note that this documentation covers all the main settings for the theme, but it doesn't cover instructions about working with WordPress, as this is a very extensive topic. If you are new to WordPress, we would recommend to first get familiar with the WordPress system, so you can have at least basic knowledge about how it works and then proceed with setting the theme.

WordPress presentation

- [What is wordpress?](#) - Wiki
- [Download link](#) - Main download page
- [Localized](#) - WordPress in your language

WordPress Codex information

- [Installation](#) - WordPress is easy to install
- [Pages vs. posts](#) - Understand the differences between posts and pages
- [Posts](#) - The articles/posts represent the content
- [Manage categories](#) - Structure your content using categories
- [Tags](#) - Group posts which have similar content
- [Pages](#) - They have multiple usage from homepage to contact, from blog page to presentation pages, etc.

Requirements for Flipmart

In this section we will present the recommended configuration under which the theme would work perfectly. Those are not absolute values, the theme performance depends on many factors like the host performance, server configuration and the number of visitors.

Server requirements

- WordPress 4.0 or later
- Apache or Nginx
- php.ini memory limit: 40MB (recommended: 64M)
- PHP version 5.2.4 or greater (recommended: PHP 5.4 or greater)
- MySQL version 5.0 or greater (recommended: MySQL 5.5 or greater)
- The mod_rewrite Apache module (optional)

For optimal performance the server requires some settings to be made, the optimizations include:

1. Use a cache plugin – we recommend [WP Super Cache](#)
2. PageSpeed optimization – we created a guide for this [here](#)

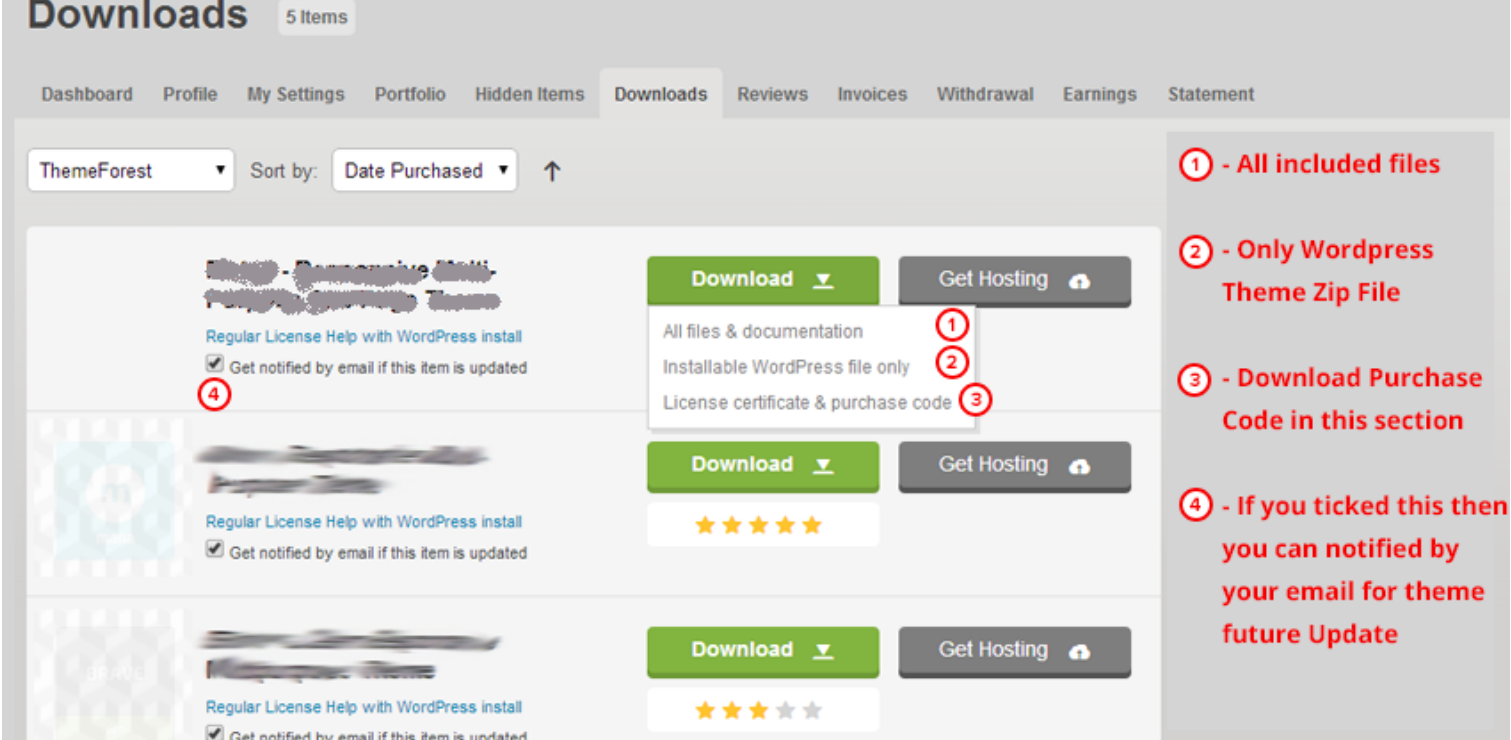

What's included in Flipmart

When you download the theme from your account on themeforest.net you can choose to download the entire package or just the theme. The theme package is a zip file which contains following structure:

- **child-theme** - the child theme files are located in the /code folder
- **documentation** - theme general info and a link to this documentation
- **licensing** - general license information
- **Demo** - contains all demo files of theme (content.xml, theme-options.json, widgets.wif)

Next, click *Download > Main File(s)* next to **Flipmart - Responsive Multipurpose Ecommerce WordPress** and save the package on your computer.

[Home](#) > [My Account](#) >

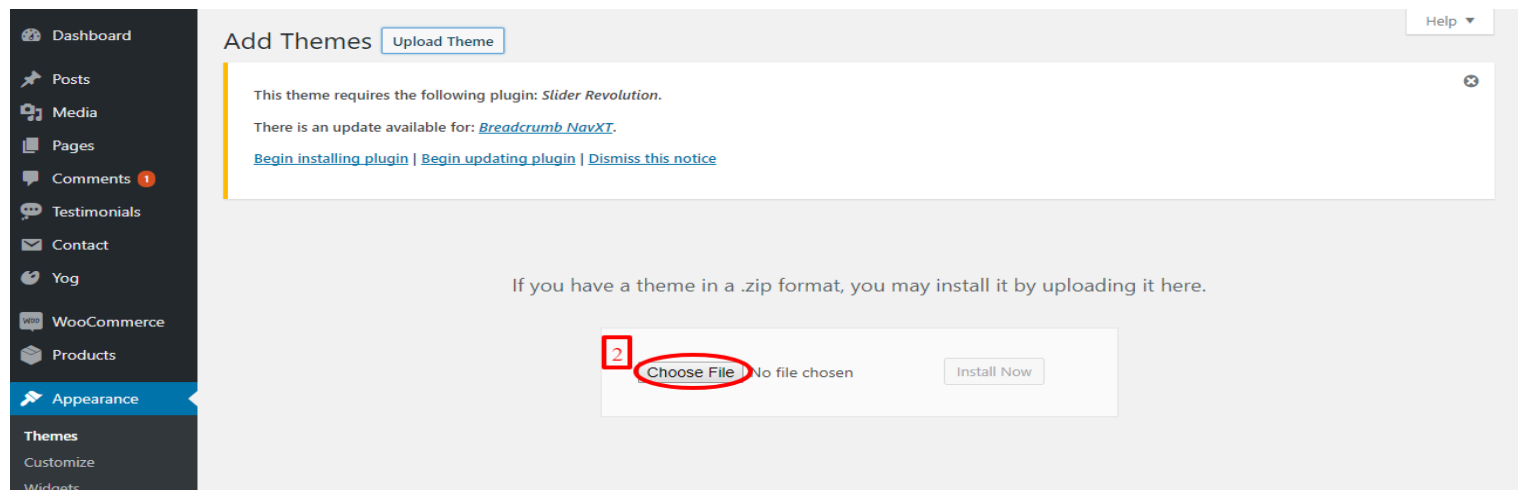

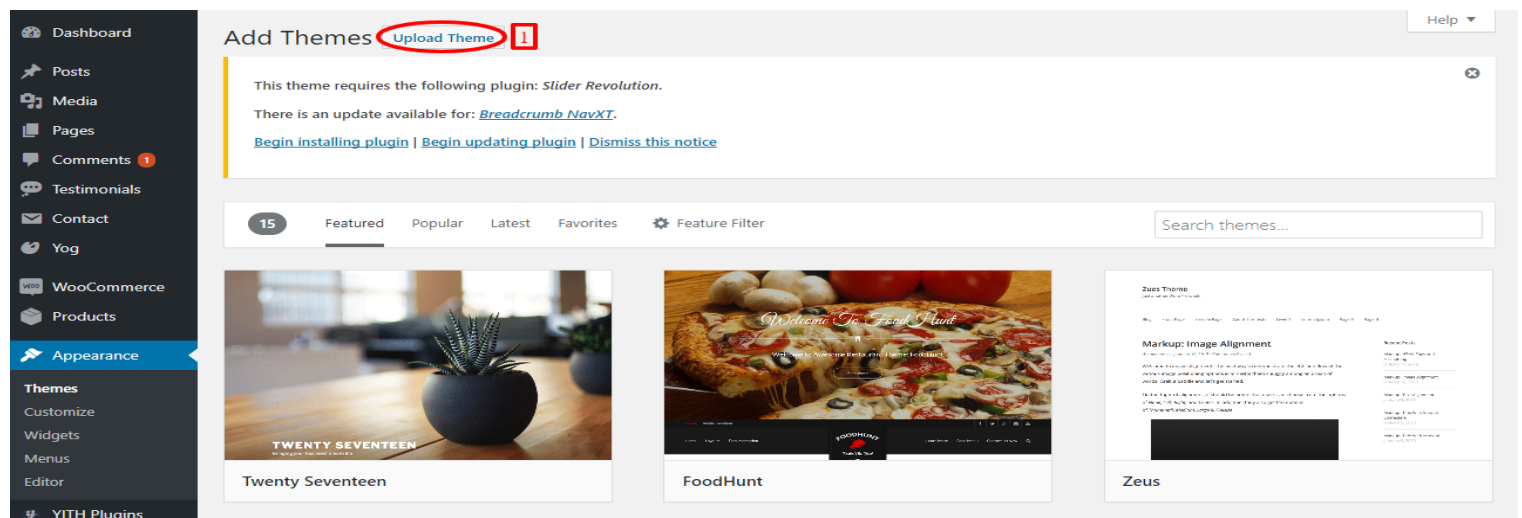

Install Flipmart Theme

Flipmart Can Be Installed in 2 Different Ways:

1. Installing through WordPress
2. Uploading through FTP (File transfer protocol)

1: Installation through WordPress:

Installing a theme through WordPress is quite a simple process. After you have logged into your WordPress account and are ready to go, on the sidebar of the Admin panel navigate to Appearance and then select Themes. After that, click on the Install Themes tab and select upload from the navigation bar below. Click the button "choose file" and locate your Theme zip file (flipmart.zip), then click the "install now" button.

After Flipmart is installed, find the Theme in Appearance > Themes and click Activate.

Install Plugins

First of all, we would like to specify that we do not guarantee the compatibility of our theme with all the third-party plugins for WordPress. Our Theme is fully compatible only with the plugins that are included in our theme and also WPML plugin. You often (not always) need to customize the extension to make it work properly with your theme. It's impossible for theme author to make the theme compatible with all existing extensions. Please, take that into your consideration and treat with understanding!

Required plugins

- [Flipmart Core Adons](#) - plugin that includes additional functionality of Engines theme.
- [Redux Framework](#) - plugin that enables Theme Options module.
- [WPBakery Visual Composer](#) - page builder.
- [WooCommerce](#) - An e-commerce toolkit.

Recommended plugins

- [YITH WooCommerce Wishlist](#)
- [YITH WooCommerce Compare](#)
- [Currency Switcher](#)
- [Contact Form 7](#)
- [Breadcrumb NavXT](#)
- [MailChimp](#)
- [Widget Importer & Exporter](#)

Install all required and Recommended plugin by using two ways

- 1: Using plugin installation notification
- 2: Using theme dashboard by click on plugin navigation menu

Update the Theme

Envato WordPress Toolkit Plugin Installation:

Using that plugin you can easily update your theme and get notifications about it. To do so follow the steps below:

1. Go to Appearance -> Install Plugins
2. Hover your mouse over Envato WordPress Toolkit plugin, and click Install.
3. From the dashboard menu, go to Plugins
4. Find Envato WordPress Toolkit Plugin, and press Activate
5. From dashboard menu go to Envato Toolkit menu
6. Enter your Envato Marketplace username and Secret API Key
7. Click on Save Settings button

Envato WordPress Toolkit

User Account Information

To obtain your API Key, visit your "My Settings" page on any of the Envato Marketplaces. Once a valid connection has been made any changes to the API key below for this username will not effect the results for 5 minutes because they're cached in the database. If you have already made an API connection and just purchase a theme and it's not showing up, wait five minutes and refresh the page. If the theme is still not showing up, it's possible the author has not made it available for auto install yet.

Marketplace Username

admin

Secret API Key

.....

Backup Information

This plugin will automatically save your theme as a ZIP archive before it does an upgrade. The directory those backups get saved to is `wp-content/envato-backups`. However, if you're experiencing problems while attempting to upgrade, it's likely to be a permissions issue and you may want to manually backup your theme before upgrading. Alternatively, if you don't want to backup your theme you can check the box below.

Skip Theme Backup

☐

Save Settings

Note: After you do this, you will be informed when each theme is updated, and can use this feature to easily update your theme.

(Optional) Easy Theme and Plugin Upgrades Plugin Installation

To ensure easy and smooth updating of themes, we suggest that you install the Easy Theme and Plugin Upgrades plugin. To do this, follow the steps below:

1. Go to Plugins -> Add New
2. Search for Easy Theme and Plugin Upgrades
3. Click on Install Now button
4. Click on Activate after installation

Easy Theme and Plugin Upgrades

[Install Now](#)

[More Details](#)

Easily upgrade your themes and plugins using zip files without removing the theme or plugin first.

Increase Max Input Vars

What is Max Input Vars?

It limits the number of input variables, this limitation affects \$_GET, \$_POST and \$_COOKIE superglobal separately. In our theme, it can affect menus.

-

1 Increasing Max Input Vars in php.ini File

At the end of the **php.ini** file, add below line of codes. The **php.ini** file can be found in /user/local/bin/, /etc/php5/ or ... depending on the host provider. If you can not find it, it's best to contact your host provider.

```
1
2 max_input_vars = 4000
3 suhosin.get.max_vars = 4000
4 suhosin.post.max_vars = 4000
5 suhosin.request.max_vars = 4000
6
```

-

2 Increasing Max Input Vars in .htaccess File

It's also possible to increase it from .htaccess file in root WordPress installation's directory. Add below line of codes at the end of the .htaccess file.

```
1
2 php_value max_input_vars 4000
3 php_value suhosin.get.max_vars 4000
4 php_value suhosin.post.max_vars 4000
5 php_value suhosin.request.max_vars 4000
6
```

One Click Demo Importer

Setting up the demo content is super easy with our **1-Click Demo Importer**.

Please, follow the steps below to import the demo data using the 1-Click Demo Importer:

- **Step 1** - Log into your WordPress Dashboard.
- **Step 2** - Go to **Yog >Dashboard > Demos;**.
- **Step 3** - click the **Import Demo** link to start the import process.
- **Step 4** - Wait until the process is done and the page is reloaded. This may take a while.
Do not interrupt/cancel the import process!

The importer should be run **only once**. If something went wrong and you need to import the content again, you may need to reset your WordPress.

Use this plugin to reset the WordPress database : <http://wordpress.org/plugins/wordpress-database-reset/>

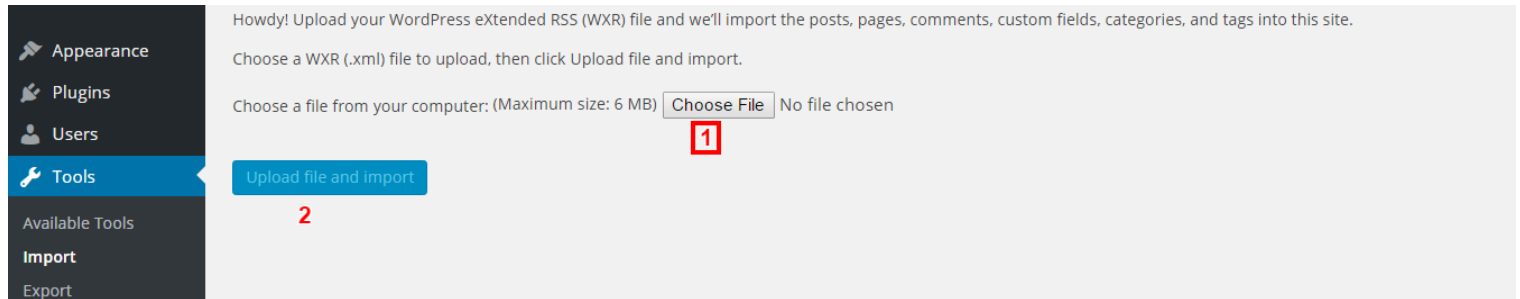

Manual Demo Import

Some servers don't support one click import. If you host your site on a sharing server or your server can't handle the import traffic, one click import will fail. In this case follow these steps to perform manual demo import.

These steps are guidelines for a manual demo import. File names may vary depending on the Demo you are importing.

Import Media files, Pages and Posts

- **Step 1** - From your dashboard click on Tools -> Import -> WordPress and install WordPress Importer.
- **Step 2** - Click on Activate plugin & run importer.
- **Step 3** - Click browse and navigate to **content.xml file** from Demo Content folder (previously downloaded from Themeforest).
- **Step 4** - Click **Upload file and import**.
- **Step 5** - Check **Download and import file attachments**.
- **Step 6** - Click Submit.
- **Step 7** - Wait for **All done have Fun!** message.

*If you don't get the **All done have Fun!** message go to Appearance -> Menus delete all the menus and start over again until you get the message.*

Theme Options Import

- **Step 1** - Navigate to **Yog > Theme Options > Import / Export**.
- **Step 2** - Click on **Import from file** then from download package demo folder choose **theme_options.json** file
- **Step 3** - Click **Import**. The page will be reloaded shortly.

The screenshot displays the WordPress dashboard for the Flipmart 1.0 theme. The left sidebar shows the navigation menu with 'Theme Options' highlighted. The main content area is titled 'Import/Export' and contains the following sections:

- Import/Export Options**: A section for managing import and export settings.
- Import sample data**: A section with a 'TODO' status.
- Import Export**: A section for saving and restoring Redux options.
- Import Options**: A section with two buttons: 'Import from File' (highlighted with a red box and a red '2') and 'Import from URL'.
- Export Options**: A section with a warning message: 'WARNING! This will overwrite all existing option values, please proceed with caution!'. It includes buttons for 'Copy Data', 'Download Data File', and 'Copy Export URL'.

At the bottom of the page, there is a footer that reads 'Options panel created using Redux Framework v3.6.5' and 'Version 4.8'.

Widgets Import

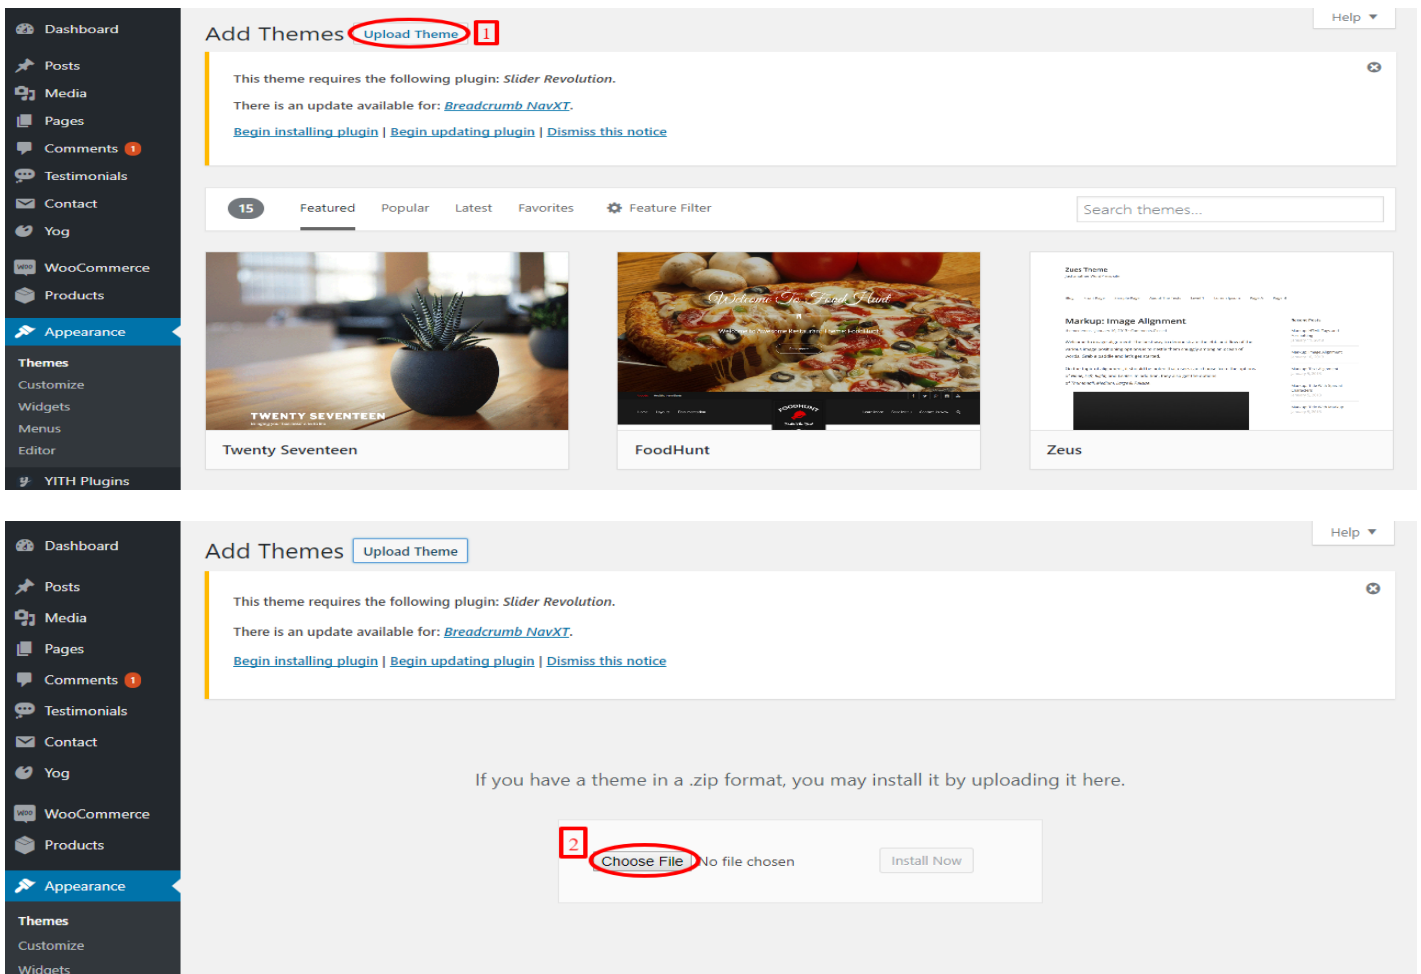

- **Step 1** - Click on **Plugins > Add New**.
- **Step 2** - Search for **Widget Importer & Exporter** plugin by Voce Platforms or download it manually [click here](#)
- **Step 3** - Go to **Tools > Widget Importer & Exporter**.
- **Step 4** - Select **widgets.wie** file from demo content folder (previously downloaded from Theme Forst).
- **Step 5** - Click **Import Widgets Button**.

Install Child Theme

Installing Child Theme is an essential step if you are going to customize Flipmart, Either by adding CSS code or overriding PHP files. Having Child Theme guarantees that your changes will not be deleted on each update of the theme and they will stay intact. Fortunately add a Child Theme to Investigate with easy steps described below.

1 Unzip Flipmart Themeforest Download File.

when you download complete package from themeforest and unzip it on your machine then you will find flipmart-child.zip file in that themeforest downloaded unzip folder then you have to install that flipmart-child.zip like any other WordPress Theme

2 Activate child theme.

so once you install Flipmart child theme then you have to activate it so that is it. Now your Flipmart child theme is install and activated so you can make change what ever you want to do so that will not override when you update Flipmart theme

Add New Post

The screenshot shows the WordPress 'Add New Post' interface. A sidebar on the left contains navigation links: Dashboard, Posts (highlighted with a red box 1), All Posts, Add New, Categories, Tags, Media, Pages, Comments, Testimonials, Contact, Yog, WooCommerce, Products, Appearance, YITH Plugins, Plugins, Users, and Tools. The main content area is titled 'Add New Post' and includes a notice about the Slider Revolution plugin and a breadcrumb update notice. Below the notice is a text input field for the title, labeled 'Enter title here' with a red box 2. The main content area is divided into two tabs: 'Visual' (selected) and 'Text'. The 'Visual' tab contains a rich text editor with a toolbar (labeled with a red box 3) and a large text area. Below the text area is a 'Word count: 0' indicator. To the right of the text area is an 'Excerpt' field (labeled with a red box 7) and a text area for the excerpt. Below the excerpt field is a note: 'Excerpts are optional hand-crafted summaries of your content that can be used in your theme. [Learn more about manual excerpts.](#)'. On the right side of the interface, there is a 'Publish' section (labeled with a red box 8) containing 'Save Draft' and 'Preview' buttons, and a 'Status: Draft' label. Below the 'Publish' section is a 'Categories' section (labeled with a red box 4) with a dropdown menu and a 'Publish immediately' button. Below the 'Categories' section is a 'Tags' section (labeled with a red box 5) with a text input field and an 'Add' button. Below the 'Tags' section is a 'Featured Image' section (labeled with a red box 6) with a 'Set featured image' button.

- **1 Add New.**

use this option for add new post.

- **2 Post Title.**

use this option to insert post tile text.

- **3 Post Single Page Content.**

use this option to insert post content which is display on single post template.

- **4 Post Categories.**

use this option to assign category to post.

use this option to assign tag to post.

- **6 Post Feature Image.**

use this option to upload and assign feature image to post.

-

7 Post Excerpt.

use this option to insert your post summary text which will be display on your blog posts.

-

8 Press the button : Publish : for save all the records and your page have been created.

Testimonial

-

1 Custom Post Type

Testimonial is a custom post type of Flipmart Theme.

-

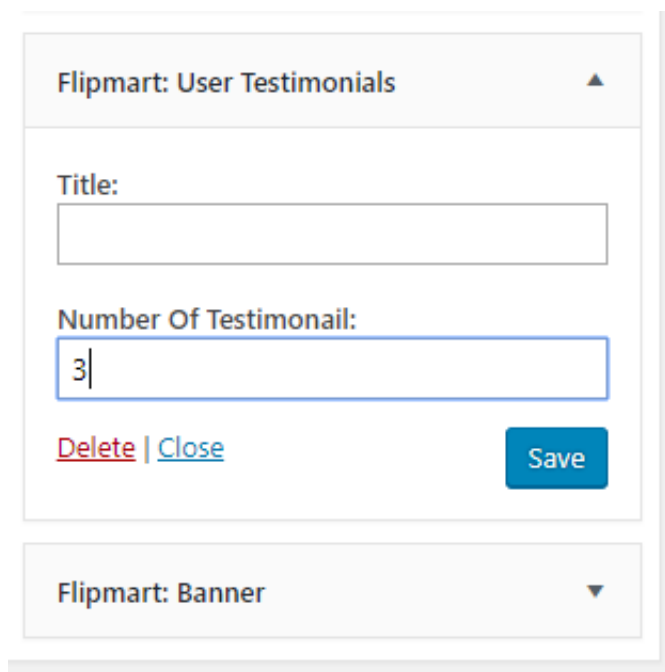

2 Used For

You can use Testimonial custom post type to create different user testimonial for your site

-

3 Front End Display

By using Flipmart Testimonial Widget you can display testimonial posts on your Page Sidebar.

The image shows a screenshot of the 'Flipmart: User Testimonials' widget settings panel. The panel has a title bar with the text 'Flipmart: User Testimonials' and a small upward-pointing triangle icon. Below the title bar, there are two text input fields. The first is labeled 'Title:' and is empty. The second is labeled 'Number Of Testimonial:' and contains the number '3'. Below these fields, there are three buttons: 'Delete' (in red text), 'Close' (in blue text), and 'Save' (a blue button). At the bottom of the panel, there is a section labeled 'Flipmart: Banner' with a small downward-pointing triangle icon.

4 Front End View

Once you choose Flipmart Blog element and save it and update your page then you will find bellow image view on your front end of that page

"Vtae sodales aliquam morbi non
sem lacus port mollis. Nunc
condime tum metus eud molest sed
consectetuer.

Add New Testimonial

The screenshot shows the WordPress dashboard with the 'Add New Testimonial' page. The left sidebar contains a menu with 'Add New' highlighted by a red box labeled '1'. The main content area has a header 'Add New Testimonial' and a notice about the 'Slider Revolution' plugin. Below the notice is a large text input field for the 'Testimonial Title', highlighted by a red box labeled '2'. To the right of the title field is a 'Publish' section with buttons for 'Save Draft', 'Preview', and 'Publish', and links for 'Status: Draft', 'Visibility: Public', and 'Publish immediately'. The 'Publish' button is highlighted by a red box labeled '5'. Below the title field is a 'Testimonial Options' panel, highlighted by a red box labeled '4'. This panel contains a 'Testimonial Content' text area and a 'Company Name' text input field. To the right of the 'Testimonial Options' panel is a 'Featured Image' section, highlighted by a red box labeled '3', with a 'Set featured image' link.

- **1 Add New.**

FAQ

How can change Avatar Image

By default all of WordPress uses [Gravatar](#) to get user's avatars. If you would like users to be able to upload their own avatar their [many available plugins](#); however we recommend [WP User Avatar](#).

- - 1Simply [install and activate](#) the plugin.
- - 2Add the [avatar_upload] shortcode on your "My Account" page under the existing WooCommerce shortcode.

How to create Google Map API Key

1 Go to the [Google API Console](#)

2 Click 'Get A Key'.

3 Select Option.

a. If you want to use an existing project, please select it from the list.

b. Otherwise, select 'Create a new project' and enter a project name.

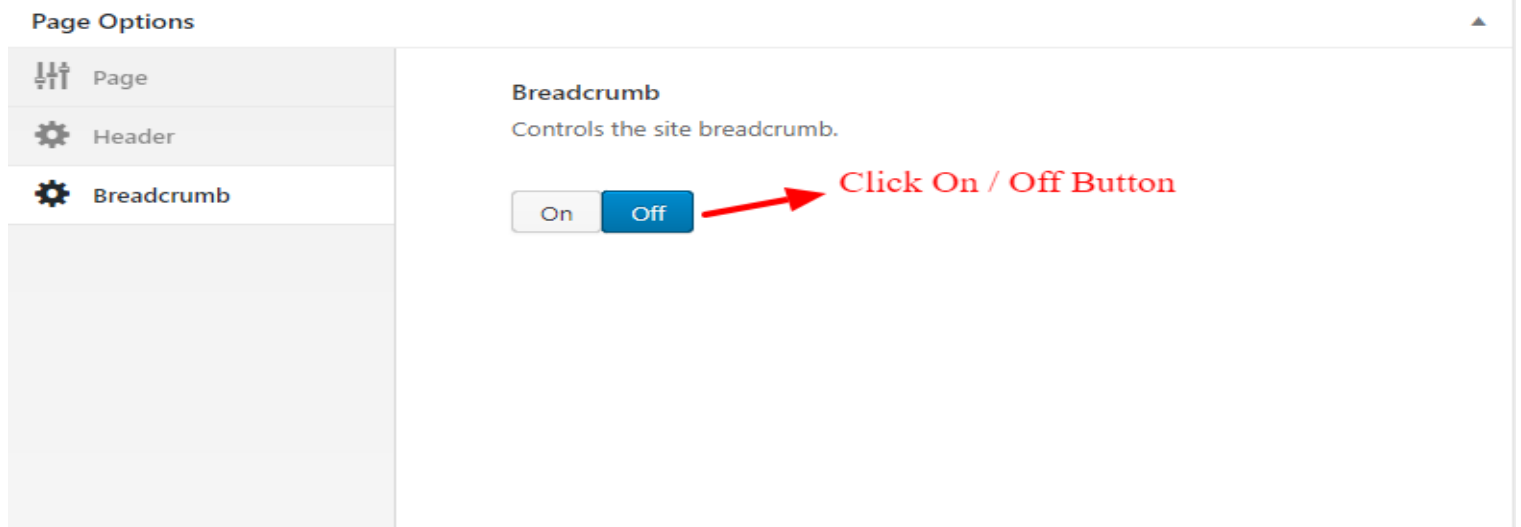

4 Click 'Enable the API' (existing projects) or 'Create and Enable API' for new projects

5 Copy the generated browser key from the popup, you'll need this to set your browser key by insert that key in theme option Google map API key Field.

The screenshot displays the 'General Settings' section of the Flipmart 1.0 theme settings. On the left is a dark sidebar with the Flipmart 1.0 logo and a menu including General, Layout, Header, Logo, Footer, Sidebars, Typography, Blog, Woocommerce, Extras, Advanced, Custom CSS, and Import/Export. The 'General' section is active. The main content area has a top bar with 'Save Changes', 'Reset Section', and 'Reset All' buttons. Below this is the 'General Settings' section. It includes a 'Custom Sidebars' section with a text input for 'Home Page Sidebar' and a 'Remove' link. Below that is a red-bordered box containing the 'Google map API key' label, a text input field with the key 'AlzaSyDW40y4kdsjsz714OVTvrw7woVCpD8EbLE', and a red arrow pointing to the input field with the text 'Insert New Key Here'. Below the red box is a 'Social Networks Icons Setting' section with a 'Show Social Icon' toggle set to 'Yes'. At the bottom is a 'Social identities' section with a form for adding social media links, including fields for Title, Icon (a dropdown menu currently showing 'FaceBook'), and Url, along with a 'Delete' button and an 'Add' button at the bottom right.

-
- - 6 To prevent quota theft, [secure your API key following these best practices](#).
 -
 - 7 (Optional) Enable billing. See [Usage Limits](#) for more information.

How to hide page breadcrumb

If you want to hide page breadcrumb on any of specific page then you can do it by using page meta field option

How to setup static page as Homepage

- - 1 Go to Settings > Reading in your WordPress Dashboard panel.
- - 2 Set "Front page displays" to a "Static Page".
- - 3 In the drop down menu for "Front Page" choose a page which will be your home page.
- - 4 Leave the drop down menu for "Posts page" empty, as this is not used by the theme.
- - 6 Save changes.
